EDUCATIONAL MOMENTS

Conversations with Children and Teenagers
by Stephanie Campbell and Amanda Davidson

WHY INITIATE A CONTACT LENS CONVERSATION?

Why fit kids and teens?
Evidence shows young people benefit from wearing contact lenses with 90% being able to successfully wear and care for their lenses.\(^1\) Researchers recommend that their use become more routine in pre-teen years.\(^2\)

Currently 93% of practitioners prescribe contact lenses to children under 18, but few offer them to young children; with parents of under 10s being much more likely to initiate the discussion than practitioners themselves.\(^2\)

Benefits include
- **Improved quality of life** – increased confidence in sports and social situations.\(^3\)
- **Safety benefits for sports** – ideal for sports where spectacles are either impractical or not permitted and ability to wear safety goggles over the top.
- **Better vision than glasses** – particularly for those high ametropes or anisometropes – very young children stand to benefit hugely from early consideration of contact lens wear.
- **Myopia control** – by 2050 it is projected 55% of the UK population will be myopic. Early efficacy studies seem to show promising results for soft multifocal lenses\(^4\) and orthokeratology.\(^5\)

Use literature
- **Confidently communicate lens safety** – parents may have been misinformed by other practitioners/online articles.
- **Have special leaflets** for young people when it comes to practising handling, with diagrams, photographs or videos.

Get support staff on board
- **Having trained and enthusiastic support staff is vital to successful fitting of young people. Consider the role of ‘contact lens buddy’ to break down any barriers for the family.**
- **Ensure your practice and staff are child friendly! Offering free Wi-Fi for children to use in the waiting area and accommodating siblings while the child is being seen are just some of the ways your team can help.**

WHAT TO LOOK AND LISTEN FOR

Build rapport
By spending time getting to know your young patients you can establish what their interests/hobbies are and then discuss if contact lenses would help them enjoy these things more.

- Ask ‘Is there anything you’re doing at the moment you think you’d do better if you didn’t have to wear your glasses?’
- Listen for clues that they remove glasses for sports/performances etc.
  - Are they afraid of losing or breaking their glasses?
  - Are the parents aware they do this?
  - Simulating to parents their child’s unaided vision can help them understand the benefit of CL correction.

Rushing into lens wear and the time and financial commitment that it brings can leave parents feeling disgruntled and unhappy

Getting the parents on board
- 82% of parents with vision corrected children say their child’s positive self-esteem is absolutely critical to them.¹
- Huge potential for myopia control when started at a young age – key factors include family history and age when myopia started.

Invite parental concerns, addressing them with current evidence
‘My child won’t look after them’ – we know that young people age 8-11 are just as capable as those aged 12-17 at looking after contact lenses.⁶

‘My child’s eyes are still growing’ – children’s corneas have reached adult size before they are 5 years old.

Ready for aftercare
For young children, ask them to complete a wearing chart for one week to include:
- Time of lens application/removal each day
- ‘Days off’
- Any handling issues or questions

Consider using a compliance ‘quiz’ to test children’s knowledge of care procedures.

Ask them to demonstrate their care and handling.

Look out for achievements once fitted
Once fitted it is the visual and social benefits that motivate kids and teens to succeed with contact lenses. Look for achievements resulting from contact lens wear such as:
- ‘Most improved player of the week’ award for a 10 year old rugby player
- Successful audition for performers
- A new activity the child start to participates in
The second - Introducing and fitting the lenses

- To allow the child to see how the lens sits, consider demonstrating the application technique on a teddy bear or model eye
- Fully engage with and ask permission before you do anything – this helps them to feel in control.
- If a child or teenager is struggling and frustrated, rebook for another day – for those sporty kids an ‘everything gets better with practice’ phrase can help whereas for a despondent teen try ‘Would you be as willing to give up on a level of your favourite computer game?’
- Use child friendly language – ‘homework’ could be given to practice holding their lids or asking them to read their written instructions carefully as you may ‘test’ them next time. Consider having a quiz or online tips available for young adults.

Adapt your technique
Consider breaking the fitting into two appointments;

The first (pre-fit)

- Elicit needs, potential complications and establish ‘ground rules’. Consider asking them to sign an easy to understand ‘agreement’ so that they carefully consider undertaking lens wear.
- Allow them to play with the lenses. Tearing them apart tests their strength and showing them drying out/rehydrating shows how they work.
- An anterior eye assessment with fluorescein/lid eversion allows you to judge how well they are likely to react to lens application at the next visit.

Typically... Try...

The 3Ms

Motivation

Maturity

Mother (or Father!)

Interest, motivation, maturity and ability to care for contact lenses are seen as more important considerations when recommending contact lenses than age.

Establishing if the child is responsible enough to look after the contact lenses and their eyes can be difficult. Try ‘do you need to be reminded to brush your teeth?’

Parents need to fully appreciate the benefits for their child and be reassured about the safety of lens wear

Ensure they understand lenses are not a total replacement for spectacles and explain the importance of a combination of vision correction options.
